## MVP Aurora – Full Automated Inspection For BGA, Bumped, LGA, QFP, J-Lead And Custom Array Or Leaded Devices

The Aurora system automates the packaging inspection process while retaining the highest level of inspection quality. Packages in JEDEC Trays are loaded as a stack in the inspection area and empty trays loaded for defect parts.

High resolution optics are used for topside inspection and 3D optics used for ball/Pin inspection.

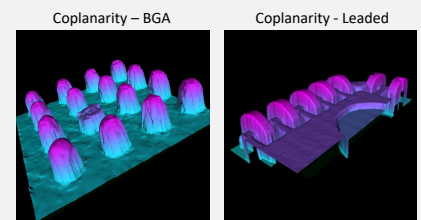

Nozzles are interchangeable dependant on product sizes. Options go from below 1mm to 9.5mm allowing support of multiple device sizes.

For data integration the MVP Aurora system uses the optional SECS/GEM, E142 e-Maps and ELSRs to provide accurate manufacturing data.

MVPs optional AutoData system provides SQL database integration for full traceability and image archiving for all devices.
